

GALVANIZED STEEL PARAPET FIXING BAR

GENERAL DESCRIPTION

ESHABAR is a galvanized prefabricated «blunt Γ» shaped metal strip, perforated with holes, diameter 6.0 mm, every 200 mm.

It is used on parapets or other vertical surfaces as a fixing element, for the mechanical fastening (anchoring) of the bituminous waterproofing membranes.

ESHABAR is placed at the horizontal edges of the waterproofing membrane and anchors it with the appropriate fasteners on the parapetes.

As **ESHABAR** is made of galvanized steel, it is not suitable for applications in contact with aggressive substances (corrosive liquids and gases etc).

TECHNICAL CHARACTERISTICS

PROPERTIES	NOMINAL VALUE	UNIT
Total Length	2500.0	mm
Width	27.0	mm
Thickness	1.0	mm
Hole diameter	6.0	mm
step between drilled holes	200.0	mm

Tolerances in the nominal values are in accordance with respective standards. Producer reserves the right to modify the properties of his products.

The information contained in this leaflet is, to the best of our knowledge, true and reliable and is supported by the present state of our knowledge. According to the care taken and the method of application, upon which we have no influence, the values are subject to divergence. Therefore for best results, prior to use, an application test should be made by the user under his own processing conditions.
